

The site is now starting to power up and get some content on board. In developing the site, we've written a new plugin to generate dynamic sliders and tabs, **FAQ Slider**. This might be useful so we've made it available in the [downloads section](#)

We're going to release our first paid for component in the near future, **Full Circle**, the first Joomla! component to offer a 360 degree appraisal system. Features will include:

1. Fully anonymised, confidential feedback aggregation with a variety of output formats
2. Feedback recipient's ability to monitor feedback progress and issue reminders
3. Archival, printing and PDF output
4. System to ensure debriefing with results of feedback
5. Multi-level administrative access to allow review of feedback
6. Encrypted data in the database to maintain confidentiality
7. Ability for system administrators to trace abusive feedback if necessary

This is a very exciting development and has taken many, many hours of development. If you are interested, please contact us for a preview demonstration.

We will also be looking to release a few other components in the near future. These will include:

1. **eDOCman** - email uploads for DOCman
2. **Add Keywords SEO** - SEO management with a brand new frontend interface for adding keywords
3. **TD Linker** - plugin to allow centralised management of all the links on your website and basic tracking of clicks

Lots to come in the next few months but why not have a look at our current offerings, the [Add Keywords, FAQ Slider and TD reCAPTCHA plugins](#)

Trafalgar Design | Powering up...
